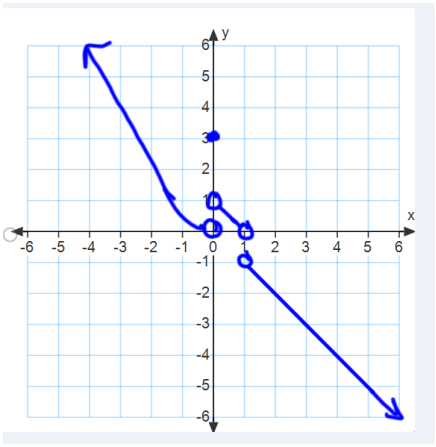
Recitation #1 Chapter 1 - Precalculus Review

Warm up:

If f is always increasing, is f^{-1} always increasing?

Group work:

Problem 1 *Given the graph of the function f below, answer the following questions.*



(a) *What is the domain of f?*

(b) *What is the range of f?*

(c) *What is $f(0)$? $f(1)$? $f(2)$?*

(d) *Does f have an inverse? Why or why not?*

Problem 2 *Find the inverse $y = f^{-1}(x)$ of the function. State the domain and range of the inverse.*

(a) $f(x) = x^2 - 4x - 5$ *(when $x \geq 2$).*

(b) $f(x) = \sqrt[4]{x+2}$.

(c) $f(x) = \dfrac{1}{(x+2)^2}$ *(when* $x > -2$*).*

Problem 3 *Find all values of* x *which satisfy the equation.*

(a) $\log_x 25 = 2$

(b) $7^x = 15$

Problem 4 *Find all values which satisfy the given equation.*

(a) $\cos(x) = 1$

(b) $\sin(3\theta) = \dfrac{\sqrt{3}}{2}$ *for* $0 \leq \theta \leq 2\pi$

Problem 5 (a) *Simplify the expression:* $\cos^{-1}\left(\sin\left(\dfrac{\pi}{2}\right)\right)$

(b) *Simplify the expression:* $\tan\left(\sin^{-1}\left(\dfrac{4}{x}\right)\right)$
