

## Recitation #3 - 2.2: Definition of Limits

### Warm up:

- (a) True or False: To find  $\lim_{x \rightarrow 2} f(x)$ , it's enough to know  $f(2.1)$ ,  $f(2.01)$ ,  $f(2.001)$ , etc.
- (b) True or False: If we know  $f(2)$ , then we know  $\lim_{x \rightarrow 2} f(x)$ .

### Group work:

**Problem 1** Given the graph of the function, estimate  $\lim_{x \rightarrow 1} \frac{x^2 - 1}{x - 1}$ . Then estimate  $\lim_{x \rightarrow 1} \frac{x^2 - 1}{x - 1}$  by creating a table of values.

**Problem 2** Sketch the graph of a function with the given properties. You need not find a formula for the function.

$$f(3) = -2, f(5) = 6, \lim_{x \rightarrow 5^-} f(x) = -1, \lim_{x \rightarrow 5^+} f(x) = 4, \lim_{x \rightarrow 3} f(x) = 7$$
$$\lim_{x \rightarrow -2^-} f(x) = 3, \lim_{x \rightarrow -2^+} f(x) = 0, \lim_{x \rightarrow 1^+} f(x) = 5$$

**Problem 3** True/False: Give an explanation or counterexample. Assume  $a$  and  $L$  are finite numbers.

- (a) If  $\lim_{x \rightarrow a} f(x) = L$ , then  $f(a) = L$ .
  - (b) If  $\lim_{x \rightarrow a^-} f(x) = L$ , then  $\lim_{x \rightarrow a^+} f(x) = L$ .
  - (c) If  $\lim_{x \rightarrow a} f(x) = L$  and  $\lim_{x \rightarrow a} g(x) = L$ , then  $f(a) = g(a)$ .
  - (d)  $\lim_{x \rightarrow a} \frac{f(x)}{g(x)}$  does not exist if  $g(a) = 0$ .
-
